Re: Delta Energy Center FDOC

Dear Mr. Badr:

We would like to submit the following two errata for the Final Determination of Compliance (FDOC) for the Delta Energy Center that was issued on October 22, 1999. The changes to each item are underlined.

1. The definition of "corrected concentration" shall be modified to read as follows:

Corrected Concentration:

The concentration of any pollutant (generally NO_x, CO, or NH₃) corrected to a standard stack gas oxygen concentration. For emission point P-1 (combined exhaust of S-1 Gas Turbine and S-2 HRSG duct burners), emission point P-2 (combined exhaust of S-3 Gas Turbine and S-4 HRSG duct burners), and emission point P-3 (combined exhaust of S-5 Gas Turbine and S-6 HRSG duct burners) the standard stack gas oxygen concentration is 15% O₂ by volume on a dry basis. For emission point P-4 (S-7 Auxiliary Boiler #1) and emission point P-5 (S-8 Auxiliary Boiler #2), the standard stack gas oxygen concentration is 3% O₂ by volume on a dry basis.

2. Permit condition number 71 shall be modified to read as follows:

71. The owner/operator shall take monthly samples of the natural gas combusted at the DEC. The samples shall be analyzed for sulfur content using District-approved laboratory methods. The sulfur content test results shall be retained on site for a minimum of five years from the test date and shall be utilized to satisfy the requirements of 40 CFR Part 60, Subpart GG. (cumulative increase)
